

# Disinfect with Confidence

**Don't let expired disinfectants lead to  
compromised results.**

Guarantee your customers experience the highest level of efficacy - check the expiration dates on your disinfectants and replace expired products with new ones.

- Disinfectants begin to lose potency or degrade over time, so the manufacturer cannot guarantee their efficacy
- Expired disinfectants may become less effective at killing germs, viruses, and bacteria, putting people at risk of illness & infection
- Most disinfecting products have a shelf life of around 1 year
