

Designed to quickly penetrate and liquefy baked on food, grease, and carbon deposits from most commercial and industrial ovens and grills.

DIRECTIONS FOR USE:

Commercial Ovens: Wearing rubber gloves and protective eye goggles, apply product to the bottom of the oven, then sides and top evenly. Allow product to stand 10 minutes in warm oven, or 25 minutes in cold oven before gently agitating with a synthetic pad or brush. Wipe surface, removing major soil and then thoroughly rinse all surfaces with potable water. Stubborn, thoroughly baked on food and carbon deposits may require additional application. Once oven is completely clean, thoroughly rinse and then heat oven to 220°F for 10 minutes before cooking additional foods.

CAUTION: Do not apply to heating elements, electrical switches or connections.

Deep Cleaning Grills: Assemble tools such as scraper, scrub brush, grill block, cloth, rubber gloves, and eye goggles. Turn grill off and while grill is still warm, scrape surface with scraper, scrub brush or grill block to remove excess grease, carbon and food deposits into grease trough and trap.

Apply product onto grill and let soak into soil for 3 minutes. Then lightly agitate surface with grill screen. Remove excess grease and food from grease trough and wipe clean with cloth. Thoroughly rinse grill plates and all surfaces completely with hot water and replace parts.

See manufacturer's recommendation for procedures in reseasoning grill with vegetable oil after cleaning.
